Mariana de Lemos Campos is a Portuguese-Brazilian lawyer and legal scholar whose work lies at the intersection of law, technology, and regulation. She holds a PhD in Law from the University of Lisbon, where she completed a thesis on responsibility in autonomous vehicles, awarded with distinction. She also holds a Master's degree in Philosophy and Theory of Law and postgraduate diplomas in Contract and Procedural Law.

Her professional practice is focused on corporate legal advisory in technology-driven sectors, with particular emphasis on digital services, artificial intelligence, and regulatory compliance. She regularly works on complex contractual negotiations, legal risk management, and data governance in the context of emerging technologies.

Mariana has published in academic journals and collective volumes in Portugal, Spain, and Brazil, addressing issues such as AI regulation, legal responsibility, and theoretical foundations of law. Her research is grounded in legal philosophy, with a particular interest in how normative theory informs legal frameworks in technologically complex environments.
